

ADMINISTRATION OF WATER COURT DECREES

An overview of the process for distribution and administration of water under Montana Water Court decrees

This is a brief overview of the enforcement process for decrees issued by the Montana Water Court. Historical decrees issued by District Courts before the inception of the Montana Water Court are also enforced in areas throughout Montana and are not included in this overview. These historical decrees did not necessarily include all water users or types of rights on a stream.

The Montana Water Court issues temporary preliminary, preliminary, and final decrees of existing water rights by hydrologic basin, based upon over 200,000 statements of claim filed by water users statewide. A statement of claim is a filing of water use prior to June 30 1973. By statute, Montana Water Court decrees can be enforced in basins, or portions of basins, with temporary preliminary and preliminary decrees after objections and hearings. To date none of the enforcement projects encompass all rights in an entire decreed basin, but are requested on specific streams or portions of streams within several basins throughout the state. At this point the projects are usually limited to surface water rights.

Requests to administer water under Water Court decrees are made by water users or the District Court. A water user petition requires signatures of 15% of the owners of water rights affected by the source to be administered. The Montana Water Court evaluates status of hearings and objections within the requested source or sources, and coordinates with the District Court, water commissioners, and water users to determine the project scope and requirements. If objections and hearings are resolved within the decree process, the Water Court requests the assistance of the DNRC to create enforcement materials for the District Court.

The DNRC reviews the claims on the requested source or sources and identifies and numbers the claimed points of diversion. The DNRC also makes note of any discrepancies and complex water delivery such as storage water and water exchanges. The DNRC prepares three reports for the Montana Water Court and the District Court. The reports are water rights listed by priority, diversion number, and ownership. These reports are for surface water rights which not only include statement of claim water right type but also changes, exempt rights, permits, and reservations. The DNRC also provides detailed maps of the diversions on a local and drainage scale. The Water Court and/or District Courts often hold public meetings in conjunction with these projects, and when asked

the DNRC also attends public meetings to explain the diversion numbering system and the process involved in generating the indexes. If errors are identified they are corrected by the DNRC or the Water Court depending on the nature and scope of the problem.

To date the DNRC has prepared 30 enforcement projects at the request of the Montana Water Court. The number of projects administered by the District Courts varies from year to year, therefore all 30 projects are not under enforcement every year, and several of the projects are being prepared for initial distribution during the 2008 irrigation season. DNRC and the Water Court maintain and update all enforcement projects every year.

Within the enforcement areas, approximately 8,000 points of diversion have been assigned enforcement numbers. All types of active surface water rights are included in these projects which total 5,285. These include water rights from both the New Appropriations Program and the Adjudication Program. In the winter of 2006/2007 all enforcement projects were converted into the Water Rights Central Data Base, a significant improvement for future efficiency.

The local District Court has jurisdiction over distribution of the water within the enforcement area. The DNRC and the Montana Water Court only provide information and correct errors found in water rights on the tabulations in the enforcement areas, and provide any other assistance requested by the District Courts. The District Court appoints a water commissioner or commissioners to deliver available water. Only the water commissioner has the authority to admeasure and distribute water to parties owning water rights in the source or sources within an enforcement area. Unless specifically identified, the duty of the water commissioner is to deliver available water within a source or sources to a point of diversion based on priority date.

The following table shows the thirty enforcement actions currently prepared. A map is also attached.

<u>E #</u>	<u>Source</u>	<u>County</u>	<u>Basin</u>	<u>Total Rights</u>
E001	Musselshell River	Meagher/Golden Valley Wheatland/ Musselshell	40A/40C	550
E002	West Gallatin River	Gallatin	41H	544
E003	Hyalite/South Cottonwood	Gallatin	41H	307
E004	Mill Creek	Park	43B	209
E005	Big Timber Creek	Sweet Grass	43B	225
E006	Sweet Grass Creek	Sweet Grass	43BV	202
E007	Shields River	Park	43A	189
E008	Cottonwood Creek	Park	43A	190
